

$$X \sim N(\mu, \sigma) \quad \boxed{6.2.17}$$

part b

①

Find probability that an observation falls in the shaded region.

②

The table gives us $P(z < 1.51) = 0.9345$

③

$$P(z < -1.51) = 0.0655$$

④ Take green minus red to get blue.

$$P(-1.51 < z < 1.51) =$$

$$0.9345 - 0.0655$$

$$= 0.869$$
